

Memento Cafe

A puzzle-adventure game

Documentation Date

Aug 12, 2026

Document Authors

Brian Scott and Germaine Reed

Key Features

Showcase the features of the project

- Puzzle-based gameplay
- Inventory system
- Multiple endings
- Dialogue and character interactions

- Memory/recall system
- Energy system
- Player choices affect the story
- File-based game progress

Objectives

What the project aims to achieve, clearly defined and measurable.

- **What it does:** A puzzle adventure game where players explore a coffee shop, solve puzzles, collect items, and make choices.
- **Why it matters:** Gives players an entertaining mystery and adventure experience.
- **Who uses it:** Anyone who enjoys puzzle, mystery, and story-based games.
- **What makes it useful:** Player choices affect the story and can lead to different endings.
- **Key features:** Inventory, character dialogue, memories, energy system, puzzles, and multiple endings.

Team Responsibilities

What everybody did.

Germaine

Assisting developer

- ReadMe
- Dialogue and basis for character file
- Presentation
- Checked over code for bugs

Brian

Lead Developer

- Created all logic
- Keeping an idea of how all should move
- Made the game flawlessly

Timeline

What took place over time.

Job	Description	Date Finished
Base design created	Brian created the base code design for the project	Aug 7, 2026
Code greatly developed	Bryan did a lot of work on the main code	Aug 9, 2026
Code finished	Brian finished the code for the main file and reworked code in the Character file	Aug 10, 2026
Outside code work	Germaine worked on logo, ReadMe, and started documentation	Aug 11, 2026
Finishing touches	Both worked on documentation and Brian checked over code	Aug 12, 2026

What we built

What we used to make it

Used tools	Purpose served	Impact
Classes and functions	Organization, Validation	 High ▾
Condition Loops	Created the death loop and choices	 Medium ▾
Lists	Energy system	 Low ▾
Files	Memory	

Testing and results

What worked and what didn't

What worked	Dates	What didn't
The display system	Aug 11, 2026	Status system: Memories did the same thing with less steps
Choices	Aug 11, 2026	Death system: Did get past after making a minor amount of changes
Memory system		

What we learned

Everything gained from this project

What were the roles of each team member?	Brian: Lead developing and majority ideas Germaine: Assisting in developing, minor ideas , and most outside code work(Logo, documentation, ReadMe)
Did you meet your goals? (Yes/No) Why?	Yes. We successfully developed the game with our python skills
What challenges did you face?	Coordination of ideas
How did you solve them?	Brian did most of the coding for his vision and told me what to do when he needed me to do it
What would you do differently next time?	Try to communicate ideas more clearly and talk about any conflicts or changes in the project

Glossary

- **Variable** — Stores information.
- **String** — Text.
- **Integer** — Whole number.
- **Boolean** — True or False.
- **Function** — Reusable code.
- **Loop** — Repeats code.
- **Conditional** — Makes decisions.
- **List** — Stores multiple values.
- **Class** — Blueprint for objects.
- **Object** — Instance of a class.
- **Method** — Function inside a class.
- **Import** — Brings in code from another file.
- **File Handling** — Reads and writes files.
